

Metal Leveler and Straightening Machine (100-2000KN)

This machine enhances efficiency in metal forming through servo and transmission technology. It achieves straightening precision up to 0.01mm with an advanced control system for precise adjustments.

Overview

Precision Metal Leveling and Straightening

This high-performance metal leveler and straightening machine is designed for demanding industrial applications requiring high accuracy and reliability. Engineered for efficiency, it features an advanced control system that allows for precise adjustments and monitoring, significantly enhancing productivity while reducing material waste. With a versatile force range, it provides consistent results, making it an ideal solution for manufacturers seeking reliable metal forming equipment.

Technical Specifications

Force Range

100 KN

Minimum Force

2000 KN

Maximum Force

Model Identifier

JEM40

Key Features

Performance Benefits

- High-precision correcting capability
- Advanced control system for precise monitoring
- High-reliability industrial design
- Reduced material waste

Primary Applications

Metal Leveling, Metal Straightening, Metal Forming
