

Metal Mounting Bracket with Mounting Holes

This metal mounting bracket features a rectangular design with rounded corners. It is constructed from a single piece of bent metal and includes two mounting holes.

Product Overview

Versatile Metal Mounting Solution

This metal mounting bracket is designed for reliable support and alignment in various industrial applications. Featuring a durable, single-piece construction with a smooth finish, it provides robust stability for machinery and structural components. The integrated mounting holes on opposite ends facilitate quick and secure installation, making it an essential component for diverse assembly tasks.

Physical Characteristics

Construction	Single-piece bent metal
Surface Finish	Smooth, galvanized appearance
Mounting Features	Two mounting holes, Opposite end placement, Rounded corners

Application

Common Applications

- Industrial machinery support
- Component alignment
- General hardware mounting
