

Metal Piercing Mill

The metal piercing mill is designed for shaping and forming metal workpieces. Its robust construction and multiple rollers enable efficient material handling in high-volume production.

Overview

Industrial Metal Piercing Mill

This heavy-duty piercing mill is engineered for demanding industrial metalworking environments. Featuring a robust construction with precision-aligned rollers and guides, it is designed to efficiently shape and form metal workpieces. Its large-scale architecture ensures high-volume production capacity, making it an essential asset for substantial material processing.

Technical Capabilities

Construction

Heavy-duty • Industrial Grade • Robust

Key Components

- Multi-roller configuration
- Precision metal guides
- High-capacity structural frame

Primary Function

Industrial metal piercing and forming
