

# Metal Plate Bending Roller

This plate rolling machine is designed for forming metal plates into cylindrical or conical shapes. It features three heavy-duty rollers arranged in a pyramid or linear configuration, allowing for precise control over the bending process.

## ADDITIONAL IMAGES

## Overview

### High-Performance Plate Rolling Solution

This industrial-grade plate rolling machine is designed for efficient, high-precision metal forming. It features advanced hydraulic transmission for both vertical and horizontal roller movement, allowing for pre-bending and roll forming in a single pass without the need to turn the plate. With PLC control and automatic leveling, it offers exceptional accuracy and reliability for heavy-duty fabrication tasks.

## Technical Specifications

### Key Performance Metrics

**50 mm**

Max Rolling Thickness

**40 mm**

Max Prebending Thickness

**3000 mm**

Max Rolling Length

**4 m/min**

Rolling Speed

### Roller Dimensions

Component	Dimension
Top Roll Diameter	600 mm
Bottom Roll Diameter	340 mm
Center Distance (Bottom Rollers)	610 mm

### Power Specifications

- Main Motor: 55 kW
- Hydraulic Motor: 22 kW
- Movable Motor: 11 kW

## Features

### Material Construction

- 42CrMo hardened upper roll
- ASTM 1045 hardened lower roll

### Optional Add-ons

Conical Bending Device

### Core Capabilities

Pre-bending Function, Hydraulic Transmission, PLC Control, Automatic Leveling, Hydraulic Drop-end, Safety Interlock
