

Metal Replacement Shovel Head

This shovel head is constructed from robust metal for durability and efficient digging. It features a broad blade for optimal soil displacement and a reinforced neck for enhanced strength.

Product Overview

High-Performance Replacement Shovel Head

This high-quality metal shovel head is engineered for maximum durability and efficiency in demanding digging and gardening environments. Featuring a broad blade design, it ensures optimal soil displacement for professional-grade results. With a reinforced neck for added structural integrity, it serves as a reliable replacement component or a base for custom tool assemblies.

Technical Specifications

Key Design Elements

- Broad blade profile
- Reinforced neck connection
- Universal attachment compatibility

Construction Material	Robust Metal
