

Metal Shaping and Cutting Machine

This metal shaping and cutting machine is engineered for precise cutting and shaping of metal components. It features a robust gantry system with a vertically mounted cutting head and an advanced control panel for automated operation.

Overview

Industrial Metal Shaping and Cutting Solution

This large-scale metallic processing machine is engineered for high-precision cutting and shaping of metal components. Built with high-strength materials, it offers exceptional stability and durability for demanding industrial environments. The system features an advanced control panel for automated operations and real-time monitoring, ensuring consistent quality across milling, drilling, and contouring applications.

Technical Specifications

Structural Design

- Robust gantry system
- Vertically mounted cutting head
- Heavy-duty support columns
- Integrated clamping mechanisms
- Large-scale worktable

Processing Capabilities

Milling, Drilling, Contouring, Precision Cutting, Shaping

Operation & Control

Control Interface

Automated Operation • Real-time Monitoring
