

Metal Shearing and Bending Machine

This precision machine is designed for shearing and bending sheet metal. It features a robust frame, a large working area, and an integrated extraction system for efficient fume and particle removal.

Overview

Precision Metal Fabrication

This precision cutting and fold-bend machine is expertly designed for demanding metal forming applications. Engineered for high accuracy and repeatability, it provides a robust solution for shearing and bending sheet metal in industrial environments. The unit features a durable, heavy-duty frame and an integrated extraction system, ensuring both operational stability and a cleaner workspace.

Key Features

Operational Features

- Integrated extraction system with multiple ports
- Adjustable leveling feet for surface stability
- Large working area for versatile fabrication

Primary Functions

Shearing, Bending, Metal Forming
