

Metal Shearing and Bending Machine

This machine is designed for metal forming operations, specifically shearing and bending. It features a robust frame, a long cutting blade, and a bending mechanism for precise metal shaping.

Overview

Versatile Metal Forming Solution

This industrial-grade metal shearing and bending machine is engineered for high-precision metal forming operations. It features a robust, durable frame capable of withstanding demanding workshop environments while ensuring consistent output. Equipped with an intuitive control panel, operators can easily adjust parameters for both cutting and bending, making it a highly efficient tool for diverse metalworking applications.

Technical Capabilities

Primary Functions	Metal Shearing, Metal Bending, Metal Forming
Control Interface	Integrated control panel for parameter adjustment and performance monitoring

Construction

Frame Construction

Robust Frame • Industrial Grade

Key Components

- Long cutting blade
- Precision bending mechanism
- Integrated control panel
