

Metal Shearing and Bending Machine

This machine is designed for shearing and bending metal sheets with precision. It features a robust stand, a cutting mechanism, and a metal guide for accurate material forming.

Product Overview

Precision Metal Forming

This metal shearing and bending machine is engineered for high-accuracy metal fabrication tasks. Designed with a robust stand and a powerful motor-driven mechanism, it provides reliable performance for cutting and folding metal sheets or strips. It is an essential tool for workshops requiring consistent, clean bends and precise shear cuts.

Technical Specifications

Construction Features

- Sturdy base stand
- Motorized cutting mechanism
- Curved metal guide for precision

Design Highlights

Precision Engineered • Industrial Grade • Integrated Motor

Machine Type	Combined Shearing and Bending Machine
Primary Applications	Metal Shearing, Metal Bending, Metal Forming
