

Metal Shearing and Bending Machine

This machine is designed for metal forming, specifically shearing and bending operations. It features a robust frame, an enclosed cutting/bending area, and a control box.

Overview

Industrial Metal Processing Solution

This metal shearing and bending machine is engineered for high-precision metal forming operations. Featuring a robust, durable frame and an enclosed workspace for enhanced safety, it is designed to handle metal sheets and plates with efficiency. The integrated electric motor and intuitive control system make it an ideal choice for professional workshops and industrial manufacturing environments requiring consistent cutting and bending performance.

Key Features

Core Capabilities

- Precision metal shearing
- Versatile metal bending
- Enclosed safety workspace
- Electric motor powered

Design Highlights

Robust Frame, Hinged Safety Lid, Industrial Grade, Integrated Control Box
