

# Metal Shearing and Folding Machine

This metal forming machine is designed for cutting and fold-bending operations. The shearing machine features a robust frame, a large flat working surface, and a vertically mounted cutting blade.

## Overview

### Versatile Metal Processing

This metal shearing and folding machine is engineered for precision cutting and fold-bending operations in diverse fabrication environments. Featuring a robust frame and a large, flat working surface, it provides stability and accuracy for demanding tasks. The integrated motor and hydraulic system ensure efficient, high-performance processing for various metal fabrication requirements.

## Machine Configuration

Machine Type	Shearing, Folding, Bending
Drive System	Hydraulic
Power Source	Electric Motor

## Key Features

### Design Highlights

- Robust frame construction
- Large flat working surface
- Vertically mounted cutting blade
