

Metal Shearing and Folding Machine

This machine is designed for both shearing and folding metal sheets. It enables the creation of different shapes and profiles through cutting and bending.

Overview

Professional Metal Processing

This metal shearing and folding machine is a specialized industrial tool designed for precision metal forming operations. Engineered for efficiency, it integrates both cutting and bending capabilities to streamline fabrication workflows. This robust equipment is an essential component for workshops requiring reliable performance in shearing and folding tasks.

Technical Capabilities

Core Functions	Metal Shearing, Metal Folding, Metal Bending, Industrial Forming
Equipment Type	Combined Shearing and Folding Unit
