

# Metal Shearing and Folding Machine

This industrial metal shearing and folding machine is designed for precise cutting and fold-bending operations. The machine features a robust frame and a control panel for adjusting cutting parameters.

## Overview

### Industrial Metal Fabrication Solution

This industrial metal shearing and folding machine is engineered for high-precision cutting and bending operations. Featuring a robust frame construction, it provides the stability required for demanding metal fabrication tasks. The integrated control system allows operators to fine-tune parameters, ensuring consistent results across various metal types and thicknesses.

## Technical Capabilities

### Control Features

- Adjustable cutting parameters
- Integrated control panel
- Precision bending control

### Core Functions

Metal Shearing, Fold-Bending, Precision Cutting

### Operation Mode

Industrial

## Construction

### Build Quality

Robust Frame • Industrial Grade
