

Metal Shearing and Folding Machine

This machine is designed for metal forming applications, performing both shearing and folding operations. It features a conveyor belt system for material handling and a control panel for parameter adjustments.

Overview

Industrial Metal Forming Solution

This robust metal shearing and folding machine is engineered for high-precision metal forming applications. Designed with an enclosed, protective housing and a transparent viewing window, it ensures operator safety while allowing for real-time monitoring of the cutting process. The unit features an integrated conveyor belt system for streamlined material handling and is mounted on wheels for enhanced mobility within industrial workspaces.

Technical Specifications

Machine Type	Combined Shearing and Folding Machine
Mobility	Yes
Safety Features	Enclosed Housing, Transparent Viewing Window

Operational Features

Material Handling	Integrated conveyor belt system
Control System	Integrated control panel for parameter adjustments
Storage	Yes
