

Metal Sheet and Coil Rolling Mill

This heavy-duty rolling mill processes metal sheets and coils. It utilizes robust rolling mechanisms, hydraulic systems, and control panels for precise operation.

Overview

High-Performance Rolling Solution

This heavy-duty rolling mill is engineered for precision processing of metal sheets and coils in demanding industrial environments. Constructed with robust heavy-gauge steel, the machine features advanced hydraulic systems and multi-roller configurations to ensure consistent shaping and finishing. Designed with operator safety at the forefront, it includes integrated safety guards and responsive emergency stop mechanisms for secure, reliable operation.

Technical Specifications

Construction Material	Heavy-gauge steel
Processing Capabilities	Metal Sheet Processing, Coil Rolling, Precision Shaping, Finishing

Safety & Control

Safety Features

- Integrated safety guards
- Emergency stop mechanisms

Control System

Hydraulic System • Precision Control Panel
