

Metal Sheet Cutting and Bending Machine

This high-precision machine is designed for cutting and bending metal sheets. It features a powerful cutting mechanism, adjustable bending angles, and a user-friendly control panel.

Overview

Precision Metal Fabrication

This high-precision metal sheet cutting and bending machine is engineered for demanding industrial metal forming applications. It features a robust construction designed to deliver consistent, accurate results during both shearing and bending processes. With an intuitive control panel and adjustable settings, it provides the efficiency and reliability required for modern manufacturing environments.

Technical Capabilities

Operational Features

- High-precision cutting mechanism
- Adjustable bending angles
- User-friendly control interface
- Robust industrial-grade construction

Core Functions

Metal Cutting, Metal Bending, Metal Folding, Sheet Forming

Applications

Ideal Industries

Industrial Fabrication • Metal Manufacturing • Sheet Metal Processing
