

Metal Sheet Cutting and Bending Machine

This metal forming machine is designed for shearing and bending metal sheets. It is a hydraulic press brake used for precision bending of metal sheets in industrial applications.

Overview

Industrial Metal Forming Solution

This robust metal sheet cutting and bending machine is engineered for high-precision shearing and forming tasks in industrial environments. Featuring a heavy-duty construction, it integrates both cutting and folding capabilities to streamline metalworking workflows. Designed for reliability and accuracy, it is an essential asset for workshops requiring versatile sheet metal processing.

Technical Specifications

Construction

Robust Design • Industrial Grade

Key Features

- Precision clamping system
- Extended bending edge
- Hydraulic operation

Machine Type

Hydraulic Press Brake / Cutting and Fold-Bend Machine

Primary Functions

Metal Shearing, Metal Bending, Sheet Forming
