

Metal Sheet Cutting and Folding Machine

This cutting and folding machine is designed for metal forming, specifically for shearing metal sheets. It ensures efficient and accurate material processing, making it suitable for various metalworking applications.

Overview

Precision Metal Processing

This metal sheet cutting and folding machine is a versatile forming solution designed for high-precision shearing and bending tasks. Engineered for efficiency, it streamlines material processing workflows in various metalworking applications. Its robust design ensures accurate results, making it an essential tool for professional fabrication environments.

Technical Specifications

Process Capabilities

- Precision Cutting
- Sheet Folding
- Material Forming

Machine Type	Shearing and Bending Machine
Applications	Metal Cutting, Metal Bending, Sheet Metal Forming
