

Metal Sheet Cutting and Folding Machine

This heavy-duty machine is designed for cutting and folding metal sheets. It features robust construction with precision rollers and hydraulic systems for accurate material processing.

Overview

Heavy-Duty Metal Processing

This industrial-grade metal sheet cutting and folding machine is engineered for high-precision metal forming applications. Built with a robust construction, it integrates reliable hydraulic systems and precision rollers to ensure accurate material processing. The machine features an intuitive control panel for seamless parameter adjustment and performance monitoring, making it an ideal solution for efficient shearing and bending operations.

Technical Capabilities

Key Components

- Hydraulic System
- Precision Rollers
- Integrated Control Panel

Build Quality

Heavy-Duty • Robust Construction

Operational Functions

Shearing, Bending, Metal Forming
