

Metal Sheet Cutting and Folding Machine

This heavy-duty machine is designed for cutting and folding metal sheets in industrial applications. It features integrated mechanical systems for precise material handling and ensures efficient shearing and bending.

Overview

Industrial Metal Forming Solution

This heavy-duty cutting and fold-bend machine is engineered for precision industrial metal forming applications. The system features a robust multi-tiered structure, integrating advanced rollers and conveyor systems to ensure accurate material handling and processing. Designed for high efficiency, it includes an accessible control panel for operational adjustments, making it a reliable choice for shearing and bending metal sheets.

Technical Specifications

Machine Type	Cutting and Fold-Bend Machine
Primary Applications	Metal Shearing, Metal Bending, Sheet Metal Forming

Design & Construction

Structural Features

- Multi-tiered structural design
- Integrated roller system
- Automated conveyor system
- Integrated access ladder

Control & Operation

Control System

Integrated Control Panel • Manual Adjustment Capable
