

Metal Sheet Cutting and Folding Machine

This cutting and folding machine is designed for precise metal forming. It integrates cutting and bending functionalities for efficient processing of metal sheets.

Overview

Versatile Metal Processing Solution

This industrial-grade machine integrates cutting and bending functionalities into a single, robust unit designed for high-volume metal forming operations. Engineered for stability and precision, it efficiently processes both metal sheets and wires to meet the demands of construction and automotive manufacturing. With its integrated control panel and safety features, it provides a consistent, reliable solution for demanding fabrication environments.

Technical Specifications

Safety Features

Safety Cover • Integrated Control Panel

Primary Functions	Metal Cutting, Metal Bending, Wire Processing
Construction	Robust frame for enhanced stability

Applications

Industry Applications

- Construction Component Production
- Automotive Parts Manufacturing
- General Metal Fabrication
