

Metal Sheet Cutting and Folding Machine

This heavy-duty machine is designed for metal forming operations, featuring a robust frame and precision cutting tools. It is capable of shearing and folding metal sheets with high accuracy and efficiency.

Overview

Industrial Metal Fabrication Solution

This heavy-duty cutting and fold-bend machine is engineered for high-precision metal forming operations. Designed for industrial environments, it combines robust structural integrity with advanced control capabilities to ensure accurate shearing and folding. The system integrates essential safety mechanisms, including protective guards and emergency stop controls, to maintain a secure and efficient workflow.

Capabilities

Performance Highlights

1 High

Operational Efficiency

1 Precision

Accuracy Level

Core Functions

Metal Shearing, Fold-Bending, Precision Forming

Safety & Control

Safety Equipment

- Protective safety guards
- Emergency stop mechanisms

Control Interface

Yes
