

Metal Sheet Cutting and Folding Machine

This machine is designed for cutting and folding metal sheets. It enhances metal fabrication processes by combining cutting and folding operations into one machine.

Overview

High-Performance Signal Enhancement

This high-power signal booster is engineered to significantly enhance the performance of CB radio systems. Designed for versatility, it operates seamlessly on power supplies ranging from 12V DC to 120V AC. Its compact, durable metal casing ensures long-lasting reliability and easy installation in various communication environments.

Technical Specifications

Power Rating

130 W

Power Output

Power Input Range

12V DC to 120V AC

Design & Build

Installation

Easy Install • Compact Design

Casing Material

Durable Metal

Features

Primary Benefits

- Enhanced signal clarity
- Extended communication range
- Reliable performance in various environments
