

Metal Sheet Cutting and Folding Machine

This precision cutting and folding machine is designed for metal forming applications. The machine is engineered for accurate shearing and bending of metal sheets, providing versatility and efficiency in manufacturing processes.

Overview

Precision Metal Forming Solution

This precision cutting and fold-bend machine is engineered for versatile metal forming applications, including accurate shearing and bending of metal sheets. Designed for efficiency and reliability in manufacturing, it features a robust frame construction and precise control mechanisms. It is an ideal solution for producing complex shapes and profiles across various metalworking industries.

Technical Specifications

Build Quality

Robust Frame • High Precision

Model Identifier

DK7732AZ

Primary Capabilities

Metal Shearing, Metal Bending, Sheet Forming
