

Metal Sheet Cutting and Folding Machine

This machine is designed for both cutting and folding metal sheets. It features a robust build suitable for industrial metalworking applications.

Overview

Industrial Metal Processing Solution

This heavy-duty cutting and folding machine is engineered for high-precision metal forming applications. Designed to handle both shearing and bending tasks, it offers a robust build quality suitable for demanding industrial environments. It provides a reliable solution for various metalworking workflows, ensuring consistent performance and structural integrity in sheet metal fabrication.

Capabilities

Suitable Applications

- Industrial Sheet Metal Fabrication
- Metalworking Tasks
- Heavy-Duty Forming

Core Functions

Shearing, Bending, Folding, Metal Forming

Performance Metrics

Construction

Heavy-Duty • Robust Build • Industrial Grade
