

Metal Sheet Cutting and Folding Machine

This machine is designed for cutting and folding sheet metal. It provides efficient and precise metalworking for various applications.

Product Overview

Professional Metal Sheet Processing

This Metal Sheet Cutting and Folding Machine is engineered for precision and efficiency in metal fabrication tasks. Designed to handle cutting and bending operations seamlessly, it provides reliable performance for workshops and industrial applications. Its robust construction ensures durability, while the ergonomic design features enhance operator comfort and control during intensive use.

Ergonomics & Design

Grip Design Features

- Contoured surface
- Alternating raised and recessed sections
- Vibration dampening
- Non-slip outer surface

Handle Grip Material	Durable, closed-cell foam
Grip Application Suitability	Tools, Sporting Equipment, Mobility Aids
