

Metal Sheet Cutting and Folding Machine

This cutting and folding machine processes metal sheets. It features a gantry-style structure with dual cutting heads and a CNC control system.

Overview

Precision Metal Processing

This industrial-grade metal sheet cutting and folding machine is engineered for high-efficiency processing. Featuring a robust gantry-style architecture with dual cutting heads, it supports both simultaneous and independent operations to maximize throughput. Integrated with an advanced CNC control system, it ensures precise, automated performance for complex metal fabrication tasks.

Technical Specifications

Structure Type	Gantry-style
Control System	CNC
Cutting Heads	2 heads

Features

Construction

Heavy-duty • Durable • Stable

Safety Features

Emergency Stop, Protective Enclosures

Operation

Control Interface

- Display screen
- Input devices
- Automated programming
