

Metal Sheet Shearing Machine

This metal shearing machine is designed for efficient and precise cutting of metal sheets and plates. It features a robust construction with high-strength steel components for durability and stability.

Product Overview

Industrial Metal Shearing Solution

This heavy-duty metal shearing machine is engineered for high-performance cutting in demanding environments such as metal recycling plants and automobile dismantling facilities. Built with a robust hydraulic system and high-strength steel components, it ensures reliable and precise cutting of various metal sheets and plates. The machine prioritizes both efficiency and operator safety, featuring hardened blades for clean cuts and integrated protective mechanisms for secure operation in smelting and founding industries.

Technical Features

Core Capabilities

- Robust hydraulic drive system
- Hardened, high-durability cutting blades
- High-strength steel structural construction
- Integrated safety guards and emergency stop functionality
- Adjustable control panel for precision cutting parameters

Primary Applications

Metal Recycling, Automobile Dismantling, Smelting, Founding Industries

Safety & Operation

Safety Features

Protective Guard • Emergency Stop Button
