

Metal Sheet Straightening Machine

This industrial flattener is designed for straightening and flattening metal sheets or plates. It features adjustable controls and safety mechanisms for customized, heavy-duty operation.

Overview

Industrial Metal Sheet Straightening Machine

This industrial flattener is engineered for high-precision straightening and flattening of metal strips. It is specifically designed to process the lead head and tail end of strips, ensuring they are perfectly prepared for subsequent operations like shearing and welding. Built with a robust frame and advanced roller technology, this machine is an essential component for heavy-duty manufacturing environments requiring consistent material quality.

Technical Specifications

Safety Features

Safety Mechanisms • Industrial Grade

Primary Function	Flattening lead head and tail end of metal strips
Operational Integration	Pre-processing for Shearing & Welding Machine
Design Features	Robust Frame, Multiple Rollers, Hydraulic Pressure System, Adjustable Controls
