

Metal Spot Welding Machine

This spot welding machine is designed for various metal joining applications. It provides efficient and precise spot welds, suitable for automotive, manufacturing, and repair applications.

Product Overview

Industrial Precision Welding

This reliable spot welding machine is engineered for versatile metal joining applications, specifically optimized for spiral wound gaskets and reinforced graphite gaskets. It handles various materials including tinplate and stainless steel with ease. Designed for industrial efficiency, the unit combines a powerful current output with high portability and simple operation for diverse working environments.

Technical Specifications

Rated Current

5000 A

Peak Current

Power Supply

220V

Compatible Materials

Tinplate, Stainless Steel, Graphite Gasket, Spiral Wound Gasket

Operational Features

Machine Capabilities

- Hand-held welding gun
- Adjustable power settings
- High mobility design
- Robust industrial construction
- Simple user interface
