

Metal Strip Processing Line

Metal strip processing lines efficiently and continuously process metal strips or coils. These lines perform operations such as uncoiling, cleaning, leveling, slitting, edging, welding, accumulating, coating, painting, drying, and recoiling.

Product Overview

Comprehensive Strip Processing Solutions

This advanced strip processing line offers high-quality, automated solutions for both ferrous and nonferrous metal industries. Designed for efficiency, the system supports various operations including uncoiling, cleaning, leveling, slitting, and coating to meet specific production requirements. These lines incorporate sophisticated control systems to ensure consistent material quality, minimize waste, and provide environmentally friendly operation.

Technical Capabilities

Core Operations

- Uncoiling and Recoiling
- Cleaning and Leveling
- Slitting and Edging
- Welding and Accumulating
- Coating, Painting, and Drying

Compatible Cold Rolling Mills

2 HI, 4 HI, 20 HI, Tandem

Industry Applications

Primary Industries

Automotive • Appliance • Construction • Packaging

Performance Metrics

System Track Record

450 units

Total Lines Installed

50 units

Recent Installations (5 yrs)
