

Metal Support Components

These metal components offer support and alignment within electronic assemblies. Their design incorporates a semi-circular base and conical projection, ideal for secure connections.

Product Overview

Precision Metal Support Components

These precision-engineered metal support components are designed for stability and alignment within complex electronic assemblies. Featuring a durable, reflective metal finish, these parts offer a robust solution for securing internal hardware, such as monitors or peripheral components. Their unique semi-circular base and conical projection design ensure precise positioning and reliable structural support for professional-grade equipment.

Technical Specifications

Primary Applications

- Electronic assembly support
- Component alignment
- Hardware structural bracing
- Peripheral mounting

Surface Finish	Polished Metal
Design Characteristics	Semi-circular base, Conical projection, Reflective surface
