

Metal Support Pedestal

This metal pedestal provides stable support and elevation. Constructed from square metal tubing, it features welded top and base plates with mounting holes on the top plate.

Overview

Robust Metal Support Pedestal

This metal support pedestal is engineered to provide a reliable, elevated foundation for various industrial and commercial applications. Constructed from durable square metal tubing, the unit features welded mounting plates at both the top and bottom to ensure structural integrity and stability. The design includes pre-drilled mounting holes on the top plate, facilitating quick and secure installation for your equipment or fixtures.
