

Metal Thread Rolling Machine

This metal thread rolling machine is designed for precise and efficient thread creation on various metal workpieces. Its robust construction ensures stability and durability, even under heavy-duty use.

Overview

Precision Thread Rolling Solution

This metal thread-rolling machine is engineered for high-precision and efficient thread creation on a variety of metal workpieces. Built with robust construction, it ensures exceptional stability and durability even under heavy-duty industrial conditions. The machine is equipped with a powerful motor, adjustable settings for versatile thread sizes and pitches, and an integrated coolant system to maintain optimal temperatures and extend tool life.

Key Features

Operational Capabilities

- Adjustable thread size settings
- Adjustable pitch settings
- Integrated coolant system

Safety Standards

Emergency Stop, Protective Guards

Performance

Application

Industrial Use • Heavy-Duty
