

Metal Upright and Frame Forming Machine

This machine efficiently forms upright metal shelves and door frames. It is designed for high-volume production, handling various metal types and thicknesses with consistent and accurate forming.

Product Overview

Industrial Precision for Shelving and Frames

This metal upright and frame forming machine is engineered for high-volume production of rack uprights and shelf components. It features a robust, multi-station forming process that ensures precise profiles suitable for both new installations and retrofitting. Designed for versatility and operational efficiency, it supports customized profiles based on specific customer drawings.

Technical Specifications

Production Process Flow

- Decoiling
- Loading
- Molding
- Cutting
- Off-discharging

Standard Production Lead Time

30 days

Certifications and Compliance

Quality Standards

ISO, SGS, Bureau Veritas, TÜV Rheinland

Service and Support

Comprehensive After-Sales Support

The product includes lifetime technical support for all operational needs. Non-artificial damage to components is covered by free replacement parts. Overseas technician assistance is available upon request, with associated costs including visa, transportation, accommodation, and a daily service fee.
