

Metallic Cogwheel with Threaded Center

This metallic cogwheel is designed with a threaded central opening. It is constructed from a durable cast metal and suitable for use in steering and transmission systems.

Product Overview

Professional Mechanical Component

This metallic cogwheel is engineered for high-performance mechanical systems requiring precise transmission or steering capabilities. Featuring a durable cast metal construction, it is designed for heavy-duty operational environments. The integration of a threaded center hole allows for secure and reliable mounting onto shafts or corresponding threaded components.

Technical Specifications

Design Features

- Precision-cut peripheral teeth
- Engineered rectangular central cutouts
- Industrial-grade threaded bore

Applications

Steering Systems • Transmission Assemblies • Mechanical Drives

Material Composition

Cast Metal, Machined Finish

Mounting Mechanism

Threaded Center
