

Metallic Pipes and Shaped Tubes for Fluid or Gas Conveyance

These metallic pipes and shaped tubes are designed for fluid or gas conveyance in industrial applications. Their metallic finish provides corrosion resistance and durability for constructing piping systems.

Product Overview

High-Performance Industrial Conveyance Solutions

These metallic pipes and shaped tubes are engineered for reliable fluid and gas conveyance across demanding industrial environments. Designed with durability in mind, they feature robust metallic finishes that provide essential corrosion resistance for long-term operational integrity. Their versatile cross-sectional designs, including cylindrical and modified teardrop or oval profiles, make them ideal for complex piping systems in chemical processing, water treatment, and manufacturing facilities.

Technical Specifications

Material Characteristics

Corrosion Resistant • Industrial Grade • Durable

Available Profiles

- Cylindrical
- Teardrop
- Oval

Primary Applications

Fluid Conveyance, Gas Conveyance, Chemical Processing, Water Treatment, Manufacturing Systems
