

# Metric Thread Round Die DIN223

This DIN223 round die is designed for creating metric threads. It is constructed from durable tool steel for long-lasting performance and compatibility with die stocks and holders.

## ADDITIONAL IMAGES

## Product Overview

### Precision Threading Solution

This DIN223 round die is a high-precision tool engineered specifically for machining external threads. Constructed from durable, high-quality tool steel, it ensures long-lasting performance and consistent results across various materials. Designed with a standard outer diameter, it offers excellent compatibility with standard die stocks and holders, making it an essential component for professional threading applications.
