

Micro Water Pump 3.0m Lift

This brushless DC aquarium pump features extended operational life and high efficiency. Its design ensures low noise, stable speed, and reliable performance for continuous use.

Overview

Compact High-Performance Pumping

The ZSP-2000 micro water pump is a highly efficient solution for drainage and irrigation applications. Engineered for reliability, this compact unit delivers a maximum flow rate of 2000 liters per hour and can reach a vertical lift of 3.0 meters. Its small form factor and 45W power consumption make it an ideal choice for professional-grade water management systems.
