

Microcomputer Line Protection Automation Unit

Automation unit designed for microcomputer line protection. It features a digital display, keypad interface, and multiple function buttons for operation and control.

Product Overview

Advanced Microcomputer Line Protection

The MPS 4000 is a comprehensive automation unit engineered for reliable microcomputer line protection. It features an intuitive digital display and a robust keypad interface, allowing for precise operation and control in industrial environments. This unit is designed to provide essential monitoring and protection functions for critical electrical infrastructure.

Technical Specifications

Model Identifier	MPS 4000-1105
Device Type	Microcomputer Line Protection Automation Unit

Features

Interface & Control

- Digital display
- Keypad input interface
- Multiple function control buttons

Key Capabilities	Line Protection, Automation, Digital Monitoring
------------------	---
