

Microwave Parabolic Antenna for Telecommunications

High-performance microwave antenna designed for focused signal transmission and reception. Its rugged construction ensures reliable operation in various environmental conditions and is suitable for telecommunications, broadcasting, and data transmission applications.

Overview

High-Performance Microwave Antenna

This microwave parabolic antenna is engineered for reliable point-to-point communication links. Featuring a precision parabolic reflector, it ensures focused signal transmission and reception for telecommunications, broadcasting, and data transmission. Its rugged construction provides durability for long-term operation in challenging environmental conditions.

Technical Specifications

Design Features

- Parabolic reflector design
- High gain
- High directivity
- Rugged environmental construction

Application	Telecommunications, Broadcasting, Data Transmission, Point-to-Point Links
Mounting	Tower or rooftop mounting
