

# Middle Duty Soil Disc Harrow

This machine pulverizes and loosens clods after plowing, and prepares land for sowing on cultivated land. It effectively mixes soil and fertilizer, while also clearing away plant stumps.

## ADDITIONAL IMAGES

## Overview

### Middle Duty Soil Disc Harrow

This middle-duty disc harrow is a versatile agricultural implement designed for efficient soil preparation and seedbed creation. It excels at pulverizing clods, leveling land before sowing, and incorporating crop residue or fertilizer into the soil. Built with a high-strength steel frame and hardened steel discs, it offers the durability needed for medium-sized farming operations.

## Construction & Design

### Maintenance Features

Sealed bearings • Weather-resistant coating • Modular design

### Frame Material

High-strength steel

### Disc Type

Concave, Scalloped edge, Hardened steel

## Operational Capabilities

### Performance Metrics

**2 Gangs**

Minimum Gangs

### Primary Functions

- Pulverizing and loosening clods
- Land leveling before sowing
- Incorporating fertilizer and crop residue
- Stump clearing

## Compatibility

Attachment System

Standard three-point hitch
