

MIG 200Y Inverter Welding Machine

The MIG 200Y is a compact and efficient inverter welding machine designed for MIG welding applications. It features adjustable parameters for precise control over welding current and voltage.

Overview

Professional MIG Welding Solution

The MIG 200Y is a compact and efficient inverter welding machine engineered specifically for MIG welding applications. Designed for versatility, it features adjustable parameters that provide precise control over welding current and voltage to ensure high-quality results. Its robust construction and portable design make it an ideal choice for both professional workshop environments and on-site field operations.

Technical Specifications

Welding Process

MIG

Model

MIG 200Y

Technology

Inverter

Key Features

Performance Features

200 A

Rated Output

System Capabilities

- Adjustable current and voltage parameters
- Integrated wire feeder for continuous supply
- Built-in monitoring meters
- Portable design for on-site use
