

MIG Welding Machine with Wire Feeder

This welding machine features adjustable knobs and meters for voltage and current control. The portable wire feeder unit ensures consistent and efficient welding for various applications.

Product Overview

Professional MIG Welding Solution

The NBC-270B is a robust MIG welding machine engineered for demanding professional environments. It features an integrated wire feeder system that ensures a smooth and consistent flow of welding wire, resulting in high-quality weld beads and improved productivity. With intuitive manual controls for voltage and current, this machine is suitable for a wide range of metal fabrication tasks requiring reliability and precision.

Technical Specifications

User Interface

- Adjustable voltage knobs
- Adjustable current knobs
- Integrated analog meters
- Dedicated connection points for welding cables

Model Number	NBC-270B
Configuration	MIG Welder, External Wire Feeder
