

MIG/MMA Digital Welding Machine with IGBT Microprocessor

This MIG/MMA welding machine is a versatile tool designed for both MIG and MMA welding. It features a digital IGBT microprocessor for precise control and efficient performance.

Product Overview

Advanced Welding Performance

This MIG/MMA welding machine features advanced IGBT microprocessor control, ensuring precise and stable welding performance for professional applications. Designed with a modular, unitized architecture, it allows for easy maintenance without the need for complex professional debugging. The robust construction includes comprehensive protection systems and a unique air duct design to minimize failure rates and extend operational life.

Technical Specifications

Supported Processes	MIG, MMA
Model Identifier	NBC 500
Control Technology	Digital IGBT Microprocessor

Features & Protection

Safety Protections

- Overvoltage protection
- Under voltage protection
- Default phase protection
- Lightning stroke protection
- Overcurrent protection
- Overheat protection

Design Benefits

Compact Design • Unitized Architecture • Unique Air Duct Cooling • Low Maintenance
