

Mini Ball Valve with Red Lever Handle

This mini ball valve controls the flow of liquids and gases. It features a durable metal body with a red lever handle and threaded connections for secure installation.

Product Overview

Compact Flow Control Solution

This mini ball valve is specifically engineered for efficient flow control of liquids and gases in space-constrained environments. Designed for versatility, it is suitable for water, air, and oil applications requiring reliable on/off operation. The unit features a durable metal construction and a high-visibility red lever handle to ensure ease of use and long-term durability in piping systems.

Technical Specifications

Key Features

- Compact form factor for tight spaces
- Threaded connections for leak-proof installation
- Durable metal body construction
- High-visibility handle for rapid identification

Compatible Media	Water, Air, Oil
Operation	Manual Red Lever Handle
