

Mini Spring Clamp Terminal Block

Mini spring clamp terminal blocks are designed for secure and reliable wire terminations. These compact terminal blocks utilize a spring mechanism for consistent electrical contact in transmission and distribution applications.

Product Overview

Compact Connection Solutions

The FJ3, FJ4, and FJ5 series mini spring-type terminal blocks are engineered to address the growing demand for space-efficient electrical connection solutions. Featuring a highly compact construction, these blocks are ideal for narrow wiring environments where space optimization is critical. Their robust spring-clamp technology ensures secure, reliable, and consistent wire terminations for various power transmission and distribution applications.

Technical Specifications

Connection Method

Spring-Clamp Technology

Available Series

FJ3, FJ4, FJ5

Conductor Configuration

4-conductor type available

Key Features

Main Advantages

- Compact construction design
- Optimized for narrow wiring environments
- Extreme space-saving footprint
- Secure and reliable wire termination
