

Mini Surface Grinder with 360° Rotating Motor

This mini surface grinder utilizes a precision linear ball slide rail system for stable and dexterous operation. The motor can rotate 360° and accept various grinding accessories to realize grinding of various cutters.

Overview

Precision Mini Surface Grinder

This mini surface grinder is engineered for precision machining tasks, featuring a versatile 360-degree rotating motor design. It is built to provide stable and accurate grinding performance for small-scale industrial or workshop applications. Its compact form factor ensures it fits efficiently into professional workspaces while maintaining high operational standards.

Technical Specifications

Motor Rotation	360°
Equipment Type	Mini Surface Grinder

Compliance

Industry Standards	Industrial Grade, Precision Machining
