

Miniature Circuit Breaker for Overcurrent Protection

Miniature circuit breaker (MCB) designed for overcurrent protection in electrical circuits. It features a compact design for DIN rail mounting and includes a thermal-magnetic trip mechanism for overload and short-circuit protection.

Product Overview

Compact Overcurrent Protection

The S250 series miniature circuit breaker is engineered for reliable overcurrent and short-circuit protection across diverse electrical installations. Its compact design facilitates efficient DIN rail mounting, making it an ideal choice for space-constrained residential, commercial, and industrial distribution boards. Featuring a robust thermal-magnetic trip mechanism, this breaker ensures safety and operational longevity for connected electrical circuits.
