

Miniature LED Automotive Bulb

This miniature LED bulb is designed for automotive lighting applications. It features multiple clear LED emitters arranged in a circular pattern and a metal base with a bayonet-style mount.

Overview

High-Efficiency Automotive Lighting

This miniature LED bulb is precision-engineered for automotive lighting applications, serving as a direct, high-performance replacement for traditional incandescent bulbs. Featuring a circular array of clear LED emitters, it delivers superior brightness and energy efficiency compared to standard lighting solutions. Its robust metal base with a bayonet-style mount ensures a secure fit, while the advanced LED technology offers a significantly longer operational lifespan for vehicle lighting systems.

Technical Specifications

Base Type	Bayonet-style mount
Construction	Metal base with bottom contact point
Emitter Configuration	Circular pattern on top

Features

Key Benefits	Energy Efficient, Long Lifespan, Automotive Grade, Direct Replacement
